

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Birds of the Headwaters of the Gila River, New Mexico: Further Records.— I desire to add three more species to the list published in Vol. XXIV, Auk, p. 327. All of these three species were taken at the G. O. S. Ranch, on Sapillo Creek, N. Mexico and are as follows:—

Astur atricapillus striatulus. WESTERN GOSHAWK.— One (♂) shot Oct. 7, 1912.

Archibuteo ferrugineus. FERRUGINOUS ROUGH-LEG.— One (♂) shot Oct. 14, 1912.

Calcarius ornatus. CHESTNUT-COLLARED LONGSPUR.— A moderate sized flock lingered in the grain stubble from Oct. 13, to (at least) Oct. 21, 1912.— W. H. BERGTOLD, *Denver, Colo.*

Double Bird Tragedy.— About eight o'clock May 6, 1913, painters working on a forcing house on the grounds of the New York Agricultural Experiment Station at Geneva, N. Y., were startled by the headlong flight past them of two birds. One was evidently frantic with terror from pursuit, the other conscious of nothing but its prey, for both birds rushed heedlessly past the men and after a flight of five or six rods more, dashed headlong into the plate-glass window of the residence of the Station Director, who, with his family, was away from home. The glass was not broken but the birds were both instantly killed, either by the shock or by breaking their necks. The concussion was heard by the forcing-house man at his work and he, with the painters, went to the place and picked up the birds. These were later identified by Mr. B. B. Fulton, Assistant Entomologist of the Station, as a Hermit Thrush and a Sharp-shinned Hawk, and the identification was later confirmed by the writer. The thrush is migratory here, the hawk resident but not abundant.— F. H. HALL, *Geneva, N. Y.*

Æsop as a Bird Observer.— Under the title of "Two ornithological fables from Louisiana" there appeared a note in 'The Auk' for April, 1913, p. 282, by W. L. McAtee, wherein two tales or fables relating to bird life were recited.

The first of these, concerning an alleged interesting fish-catching habit of *Mycteria americana*, is beyond the writer's power to verify. If the story, or at least the substance of it, be true, the easiest explanation at hand is that given by Mr. McAtee, i. e., that the scales allure small fishes in search of food and that these, rising to the surface in great numbers to nibble at the bait, are devoured by the Ibises.

The second tale, however, is of course to be relegated to the realm of myth and is as old as Æsop. As it is very beautiful and of great ethical importance in the proper education of good boys and girls, besides being of interest owing to its great antiquity, it deserves to be quoted in the original. The Latin is taken from an edition entitled "*Æsopi Fabulae Graeco-Latinae*," &c., Eton, 1807, II, p. 26, and is a model of brevity:

"Formica sitiens descendit in fontem, ac tracta a fluxu, suffocabatur.
